

ENVIRONMENTAL AND SOCIAL POLICY

As Erguvan Energy, we believe that wind energy is the one of the most environmental-friendly renewable energy sources. The business model and all the activities of our company is based on protecting the environment and selecting the most environmental-friendly options. We also aim to contribute to the welfare of the local communities and meet our social responsibilities in the project areas.

As Erguvan Energy, we believe that raising awareness on the environment and conserving natural sources by appropriate environmental management systems are essential while conducting all activities. We aim to contribute to struggle against global warming by maintaining the clean-energy projects with high environmental sensitivity in the Turkey. Our purpose is also contributing to regional development by prioritizing local employment and supporting the needs of the local communities.

In this sense, we commit to perform the following fundamental principles in all our activities:

- All national laws and regulations, as well as international standards related to the environment are followed by preparing an environmental management system.
- During the activities, produced wastes are recycled, recovered and reused to the extent possible, or disposed properly. Wastes are reduced at the source as possible.
- All comments, suggestions or compliments internally/externally is taken into account and grievance mechanism is always implemented.
- Environmental and social risks and impacts on biodiversity directly or indirectly are identified, evaluated, controlled and prevented by monitoring and updating the environmental management plans.
- All our stakeholders such as employees, suppliers, costumers, business partners, and local communities are included while implementing protection activities of the environment.
- All our employees, investors, suppliers and stakeholders are informed about the impacts of the project on the environment, and employees are trained for minimizing social and environmental impacts and risks.
